

HAL GREER BOULEVARD COMPLETE STREET PROJECT: MEDIANS

When completed, the Hal Greer Boulevard Complete Street Project will feature landscaped medians throughout the project area between the vehicle lanes. The purposes of the medians are multi-fold, with the ultimate goal of improving safety for drivers, pedestrians, bicyclists, and transit riders.

BENEFITS

- Controls left hand turning movements, limiting potential points of conflict, and improving traffic flow.
- Shortens pedestrian crossing distances in areas with crosswalks.
- Protects pedestrians in crosswalks from vehicles.
- Planted medians allow for rainwater to soak into the ground, rather than running off onto the road, which reduces potential for flooding from stormwater runoff.
- Improves the appearance of the streetscape with the addition of landscaping and trees.
